Software Engineer (Fresher)

Full-stack developer with hands-on experience building production web applications using React, TypeScript, Node.js, and MongoDB. Experienced in end-to-end feature delivery, REST API design, authentication, and role-based access control.

SKILLS

- FRONT-END:** React 18, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Tailwind CSS, React Query, Redux-Saga, Yup, Quill, Preactjs
- BACK-END:** Node.js, Express.js, NestJS, REST APIs, GraphQL, NoSQL/SQL, Prisma, JWT, RBAC.
- INFRA & TOOLS:** Git, Docker, Postman, AWS (EC2, S3), Firebase, Bun
- ENGINEERING CONCEPTS:** Clean Architecture, MVC, MVVM, Modular design, OOP, Authentication & Authorization, Agile/Scrum

WORK EXPERIENCE

Software Developer Intern	Aug 2025 - Nov 2025
Draco	HCMC
- Owned end-to-end feature development across frontend, backend validation, and database workflows for 3 ERP modules (accounting, UI, internal chat). - Designed and implemented REST APIs with JWT-based authentication, ensuring secure role-based access control. Improved transaction consistency by validating edge cases and reducing data anomalies in internal workflows. - Collaborated with frontend, backend, and AI teams to integrate Python-based agent APIs and document processing services. - Applied foundational cloud concepts (service integration, environment configuration) and Oracle database fundamentals (schema design, relational modeling) while supporting enterprise ERP features.	
Software Developer Intern	Jul 2025 - Jul 2025
SKIPLI	HCMC
- Built an admin dashboard using React and Node.js to manage users, content, and system operations. Implemented JWT authentication and role-based authorization for admin and editor roles. Integrated Firestore real-time synchronization for admin data updates. Outcome: 2 user roles implemented and secured 3+ admin modules delivered Real-time data sync enabled for admin operations	
Front-End Intern	Apr 2024 - May 2024
E-PARTNER	HCMC
Developed responsive React and Redux components supporting 5+ core user flows across multiple devices. Integrated REST APIs and supported frontend-backend deployment for customer-facing production releases.	
Frontend Intern	Mar 2023 - May 2023
FPT IS	HCMC
- Developed frontend Reactjs and supported backend feature implementation REST API. Worked with relational databases and participated in Agile/Scrum sprints. Outcome: 5+ REST API endpoints delivered 3+ frontend features implemented 10+ bug tickets fixed and merged	
Frontend Developer	Mar 2022 - Jun 2022
Freelance	HCMC
- Converted Figma designs into responsive web interfaces using HTML, CSS, and React, delivering landing pages for event promotion, personal business, and interior design websites. - Implemented responsive layouts and reusable UI components, translating business requirements into user-focused frontend solutions. - Collaborated directly with clients to iterate on UI requirements and deliver production-ready pages. - Designed data models and schemas and proposed technical solutions using Prisma ORM to support scalable backend development.	

PROJECTS

Phan Thiet Hotel Web 	Aug 2025 - Dec 2025
Built a production-ready hotel booking system using React, TailwindCSS, Node.js, MongoDB, REST APIs, MVC, JWT, and Clerk authentication. Developed an admin dashboard supporting CRUD operations for hotels, rooms, pricing, availability, bookings, and user roles. Implemented server-side availability and date-overlap validation to prevent conflicting bookings, and validated APIs via Swagger/OpenAPI, Devtools and Postman. Implemented search, filtering, and SEO best practices (semantic HTML, meta tags, structured URLs) with UX-focused booking and checkout flows. Deployed backend services and configured secure environments for development and testing. Integrated Brevo (SMTP) for automated booking confirmations and Cloudinary for standardized image management. Produced technical documentation including ERD, UML, and BPMN diagrams, and coordinated task planning within the team.	
Healthy Food EC Web 	May 2024 - Sep 2024
- Built a production-ready e-commerce platform using React, TypeScript, Node.js, MongoDB, and GraphQL, following a modular monolith architecture with clear domain boundaries. - Designed the frontend using container–presentation architecture, separating UI components from business logic via custom React hooks and service layers, and managing shared state with Context for predictable client-side behavior. - Integrated frontend and backend using Axios and React Query, implementing custom hooks for data fetching, caching, and mutations to ensure reliable data flow and responsive UI. - Implemented JWT-based authentication, RBAC, password encryption with bcrypt, and centralized input validation and sanitization to secure application workflows. - Built rich-text content workflows using Quill with robust form validation via Yup, supporting complex admin content creation and editing. - Developed a feature-rich admin dashboard supporting CRUD operations for products, orders, promotions, and content management. - Integrated Stripe for secure payment processing and implemented automated order, payment, and email notification workflows using Nodemailer. - Implemented search, pagination, and filtering with optimized query parameters, applied SEO best practices (semantic HTML, meta tags, structured URLs), and designed UX-focused browsing and checkout flows. - Applied tree-based algorithms for content moderation and inventory indexing, improving lookup efficiency and lifecycle management. Containerized backend services with Docker and validated APIs using Swagger/OpenAPI and Postman. Outcome: Processed 100+ Stripe test orders with no duplicate or inconsistent payments. Achieved sub-500ms API response times across core business workflows.	
Theoretical Driving Test Platform 	Feb 2024 - Apr 2024
- Built a web-based theoretical driving test platform supporting multiple license categories with a question bank of 650+ questions and randomized test generation. - Developed ASP.NET Core Web API, Entity using MVVM architecture, implementing authentication-protected Admin APIs for full CRUD operations on questions and categories. Designed and implemented a responsive React frontend with Tailwind CSS and SCSS, supporting dark mode and adaptive layouts. - Integrated frontend and backend using Axios/Fetch APIs, ensuring reliable data fetching and client-side state handling. - Designed relational database schema using SQL Server, including ERD and optimized query structures via MySQL Workbench. - Deployed backend services on AWS EC2 and integrated Amazon S3 for scalable media and asset storage. Produced technical documentation including ERD, UML, and BPMN diagrams, and coordinated task planning within the team. Containerized backend services validated APIs using Swagger/OpenAPI, Devtools and Postman.

EDUCATION

Information Technology Engineer	Oct 2020 - Dec 2026
Saigon Technology University	
- Excellent grade in Information System Analysis & Design (2023) and Software Engineering System Design (2022). - Talent Student Scholarship and awarded a Dual Degree Scholarship (TDTU & LTU - 2020).	
Information Technology Engineer	Sep 2020 - Dec 2026
Self-Directed Technical Training	
Completed structured learning paths on Udemy, Microsoft Learn, and FreeCodeCamp covering Reactjs, Node.js/Express, TypeScript, REST APIs, GraphQL, MongoDB, SocketIO, Git and database fundamentals. Applied this knowledge to build and maintain real projects such as YFood and <u>Phan Thiet Hotel</u> .
